Simple Wave Equation 2D
by Carlos Palenzuela
Version: Gaussian profile flat BC
October 7, 2024

Fields
$alpha$, phi, K

Spatial Coordinates
x, y

Time Coordinate
t

Parameters

Parameter	Type	Default value
$agauss$	REAL	1
$bgauss$	REAL	0.02
$kappa$	REAL	0
$phi_asymptotic$	REAL	0
$phi_falloff$	REAL	0
$K_asymptotic$	REAL	0
$K_falloff$	REAL	0
$tend$	REAL	2

Imported Models
Wave Equation 2D

Region

main
Interior models
Wave Equation 2D

Spatial Domain

Coordinate	Min	Max
x	-1	1
y	-1	1

Initial Conditions

The condition is:

$$alpha = agauss\ e^{\frac{-(x^2+y^2)}{bgauss}} \tag{1}$$

$$K = 0 \tag{2}$$

$$phi = 1 \tag{3}$$

Boundary conditions

Segments: main

Type: flat
Axis: All
Side: All

Fields: *alpha*, *phi*, *K*

Boundary precedences

1. x-Lower
2. x-Upper
3. y-Lower
4. y-Upper

Finalization Conditions

The condition is:

$$t \geq tend \tag{4}$$
